

Online Event Management System

<https://github.com/aiyshwary/Online-Event-Management-System>

[SQL](#) [NoSQL](#) [Database Design](#) [Normalization](#)

OVERVIEW

A database-driven system for managing events end-to-end, allowing customers to register, browse and book events with discounts, while giving administrators full control over event listings, users, payments and preferences.

IMPACT

Designed and implemented a normalized relational database and NoSQL schema for an Online Event Management System, covering customer registration, booking workflows, discount management, and payment processing.

TECHNICAL WALKTHROUGH

Online Event Management System – Project Explanation

This project is a database-driven Online Event Management System designed to help users register, browse, and book events online, while allowing admins to manage events, users, discounts, and payments efficiently.

Problem it Solves

Managing events manually is time-consuming and error-prone—especially

when handling

i) Multiple event types

ii) User registrations

iii) Discounts and special preferences

iv) Payments and bookings

This system provides a centralized, structured database that automates all these processes.

Key Actors

User

Registers using email and password

Browses events

Books events with number of seats

Applies discounts and special preferences

Makes payment using multiple modes

Can update or cancel bookings

Admin

Logs in with admin credentials

Adds, updates, or deletes

i) Events

ii) Discounts

iii) Special preferences

iv) User details

v) Manages pricing and discount rates

vi) Core Database Modules

vii) User

Stores registered user details

i) User ID, Email, Username, Password

ii) Users must register before booking any event.

iii) Event Details

Stores complete event information

i) Event name, type, date & time

ii) Duration and base price

Each event belongs to a specific event category.

Event Discount

Manages discount options

- i) Premium account
- ii) Group booking
- iii) Coupon-based discounts
- iv) Each discount has a rate reduced value.
- v) Special Preference

Optional add-ons for users

- i) VIP seats
- ii) Backstage access
- iii) Exclusive services
- iv) These come with extra charges.
- v) User Booking

Acts as the core linking table

Connects User, Event, Discount, and Special Preference
Stores number of seats booked

Each booking has a unique Booking ID

This table enforces referential integrity using foreign keys.

Amount

Handles payment details

- i) Payment ID
- ii) Booking ID

iii) Mode of payment

iv) Admin

v) Stores admin login credentials and permissions.

vi) Database Design Highlights

vii) Fully normalized (3NF) to avoid redundancy

viii) Strong foreign key relationships

ix) Uses indexes for faster search

x) Supports views for business insights

xi) Important SQL Features Used

xii) Queries

xiii) Simple queries

xiv) Aggregate queries

xv) Join queries

xvi) Views

Examples

Total amount payable by each user (including discounts & extra charges)

Users who registered but never booked

Number of bookings per user

Events sorted by price for easy searching

Indexes

Faster event search by type & name

Unique email constraint for users

Faster lookup for bookings, discounts, and prices

Overall Summary

This project implements a relational database–based Online Event Management System that efficiently handles user registrations, event bookings, discounts, special preferences, and payments with strong data integrity and optimized query performance.

KEY DETAILS

- 1.** Designed a fully normalized relational schema (up to 3NF) with entities for Users, Events, Bookings, Payments, and Discounts.
- 2.** Modeled equivalent NoSQL document structures for flexible event-type storage and preference handling.
- 3.** Admin interface supports CRUD operations on events, user management, and discount configuration.
- 4.** Customer portal enables account creation, event browsing, booking with preference selection, and payment tracking.
- 5.** Schema documented with ER diagrams, normalization steps, and a detailed project report.
