

Online Event Management System

<https://github.com/aiyshwary/Online-Event-Management-System>

[SQL](#) [NoSQL](#) [Database Design](#) [Normalization](#)

OVERVIEW

A database-driven system for managing events end-to-end, allowing customers to register, browse and book events with discounts, while giving administrators full control over event listings, users, payments and preferences.

IMPACT

Designed and implemented a normalized relational database and NoSQL schema for an Online Event Management System, covering customer registration, booking workflows, discount management, and payment processing.

KEY DETAILS

- Designed a fully normalized relational schema (up to 3NF) with entities for Users, Events, Bookings, Payments, and Discounts.
- Modeled equivalent NoSQL document structures for flexible event-type storage and preference handling.
- Admin interface supports CRUD operations on events, user management, and discount configuration.
- Customer portal enables account creation, event browsing, booking with preference selection, and payment tracking.
- Schema documented with ER diagrams, normalization steps, and a detailed project report.
