

Video RAG Retrieval Project

<https://github.com/aivshwary/Video-RAG-Retrieval>

OVERVIEW

Implements a Video Retrieval-Augmented Generation (RAG) system. Enables semantic search on video segments and frames into embeddings for nearest-neighbor lookups.

IMPACT

Features: Frame extraction, scene description, text/image embeddings, FAISS vector store, semantic search. Index scenes, run text queries, retrieve relevant video segments. Installation: Python, pip, requirements. Extensible for advanced scene detection and production vector databases.

KEY DETAILS

1. Frame extraction, scene description, text/image embeddings, FAISS vector store, semantic search
2. Index scenes, run text queries, retrieve relevant video segments
3. Extensible for advanced scene detection and production vector databases
